## Equations of Normal in Different forms.

(1) Point form:The equation of the normal to the parabola $y^{2}=4 a x$ at a point $\left(x_{1}, y_{1}\right)$ is $y-y_{1}=-\frac{y_{1}}{2 a}\left(x-x_{1}\right)$

Equation of normals of all other standard parabolas at ( $\mathbf{x}_{1}, \mathbf{y}_{1}$ )

| Equation of parabolas | Normal at $\left(\mathbf{x}_{1}, \mathbf{y}_{1}\right)$ |
| :--- | :--- |
| $y^{2}=-4 a x$ | $y-y_{1}=\frac{y_{1}}{2 a}\left(x-x_{1}\right)$ |
| $x^{2}=4 a y$ | $y-y_{1}=-\frac{2 a}{x_{1}}\left(x-x_{1}\right)$ |
| $x^{2}=-4 a y$ | $y-y_{1}=\frac{2 a}{x_{1}}\left(x-x_{1}\right)$ |

(2) Parametric form: The equation of the normal to the parabola $y^{2}=4 a x$ at $\left(a t^{2}, 2 a t\right)$ is $y+t x=2 a t+a t^{3}$

| Equations of normal of all other standard parabola at 't' |  |  |
| :--- | :--- | :--- |
| Equations of parabolas | Parametric co- <br> ordinates | Normals at 't' |
| $y^{2}=-4 a x$ | $\left(-a t^{2}, 2 a t\right)$ | $y-t x=2 a t+a t^{3}$ |
| $x^{2}=4 a y$ | $\left(2 a t, a t^{2}\right)$ | $x+t y=2 a t+a t^{3}$ |
| $x^{2}=-4 a y$ | $\left(2 a t,-a t^{2}\right)$ | $x-t y=2 a t+a t^{3}$ |

(3) Slope form: The equation of normal of slope $m$ to the parabola $y^{2}=4 a x$ is $y=m x-2 a m-a m^{3}$ at the point $\left(a m^{2},-2 a m\right)$.

Equations of normal, point of contact, and condition of normality in terms of slope ( $m$ )

| Equations of <br> parabola | Point of contact in <br> terms of slope $\mathbf{( m )}$ | Equations of normal <br> in terms of slope (m) | Condition of <br> normality |
| :--- | :--- | :--- | :--- |
| $y^{2}=4 a x$ | $\left(a m^{2},-2 a m\right)$ | $y=m x-2 a m-a m^{3}$ | $c=-2 a m-a m^{3}$ |
| $y^{2}=-4 a x$ | $\left(-a m^{2}, 2 a m\right)$ | $y=m x+2 a m+a m^{3}$ | $c=2 a m+a m^{3}$ |
| $x^{2}=4 a y$ | $\left(-\frac{2 a}{m}, \frac{a}{m^{2}}\right)$ | $y=m x+2 a+\frac{a}{m^{2}}$ | $c=2 a+\frac{a}{m^{2}}$ |
| $x^{2}=-4 a y$ | $\left(\frac{2 a}{m},-\frac{a}{m^{2}}\right)$ | $y=m x-2 a-\frac{a}{m^{2}}$ | $c=-2 a-\frac{a}{m^{2}}$ |

Note: The line $l x+m y+n=0$ is a normal to the parabola $y^{2}=4 a x$ if $a l\left(l^{2}+2 m^{2}\right)+m^{2} n=0$
